

Surna Cultivation Technologies Signs First Preventative Maintenance Contracts

Quickly Converts New Service Offering to Recurring Revenue Orders

Boulder, Colorado, November 11, 2021 — Surna Inc. (OTCQB: SRNA), operating as Surna Cultivation Technologies, was awarded preventative maintenance contracts for HVACD systems from facilities in Arizona and Michigan. These facilities operate a combined 75,000 square feet of cultivation space.

“Surna Cultivation Technologies is excited to sign our first preventative maintenance contracts,” said Grant Wilkerson, Surna Project Manager. “By utilizing these services, our customers can feel confident that their systems will operate at their peak performance and that their HVACD (environmental control) equipment will be regularly serviced to remain sustainable for the long haul.”

Surna can provide reliable, local maintenance services for facilities regardless of HVACD system type, manufacturer, or facility location. Surna’s maintenance team initially performs an overall assessment of each piece of equipment, which helps to identify potential problems before they are emergencies. They then communicate with the customer at scheduled intervals ensuring maintenance tasks are completed and work with the customer’s cultivation team to avoid disruption of the critical work being done in their facility.

Surna’s HVACD maintenance plans are customized for the individual needs of each facility, and owner, to ensure that the goals of the individual business is being met. Surna’s goal in providing maintenance services is to optimize the customer’s mission critical environmental controls system and maximize their uptime both now and into the future.

About Surna

Surna Inc. (www.surna.com), operating as Surna Cultivation Technologies, is an industry leader in CEA facility design and technologies. We provide full-service licensed architectural and mechanical, electrical, and plumbing (MEP) engineering services, carefully curated HVACD equipment, proprietary controls systems, lighting, and benching and racking products. Our team of project managers, licensed professional architects and engineers, technology and horticulture specialists and systems integrations experts help our customers by precisely designing for their unique applications. Through our partnership with a certified service contractor network, we provide installation and maintenance services to assist in a smooth build-out and optimal facility performance. We have been providing solutions to indoor growers for over 15 years and have served over 800 cultivators with over 200 of them being large, commercial projects.

Headquartered in Boulder, Colorado, we leverage our experience in the industry to bring value-added solutions to our customers that help improve their overall crop quality and yield, optimize energy and water efficiency, and satisfy evolving state and local codes, permitting and regulatory requirements.
